### Undergraduate Thesis

- **Title:** “A Study on Non-Invasive Hemoglobin Measurement Techniques and Predictions”  
**Supervisor:** Prof. Dr. M.M.A Hashem, Dept. of Computer Science and Engineering, KUET  
**Details:** This research is based on a non-invasive way to measure the hemoglobin level. We took about 10 seconds video for each subject from body organs like an index finger by different Led-Board. We applied image processing techniques for features extraction. For best features selection, we used genetic algorithm. Finally, we applied different machine learning techniques on selected features to predict the hemoglobin level.
